

EXAM – OOADI

TOPICS AND GUIDELINES, 2026

Guidelines

The exam will take approximately 15 minutes per student, with another approximately 5 minutes allocated for grading. In case of dispensation for extended time, you have 23 minutes total instead. You are allowed to bring your computer and any notes to the exam. External communication during the exam is prohibited, and it is recommend that you close any communication apps ahead of time, or (at least) use flight mode for devices brought to the exam room.

You are not expect, nor recommend, to prepare slideshow presentations, as time is limited. But in case you wish to show/use/demonstrate code from lectures and exercises, please have your materials prepared and ready so it is easy for you to access and present directly from your computer.

At the beginning of your exam, after the initial formalities (greetings, presenting student card), you will draw a random topic from the list below. In most cases, this topic will be based on the contents of two related lectures. During the exam, you will be expected to do the talking, but expect to receive supplementary questions related to the topic. Questions can also diverge slightly from the topic in question, when relevant. So please also be prepared for this.

After questioning has concluded, you will be asked to step outside, while the examiners deliberate on grading. Once ready, you will be called back in to receive your grade, along with a few comments.

Topics

Question	Lecture(s)	Topic
1	1, 2	Classes, fundamentally
2	2, 3	Classes and how they relate
3	2, 4	Objects and data structures
4	4, 5	Polymorphic data
5	5	Interfaces and their uses
6	4, 6	Structured data
7	7, 8	Multi-threading
8	8, 9	Asynchronous communication
9	10	Exceptions and I/O etc.

Reexamn

In the unlikely event of a reexamn, this will follow the same structure as outlined above.
